

1, Types of mediums ?

- * Radio Frequency
- * Electrical Signal
- * Light Signal

2, Write down switch 8-pins ?

1 + R

2 - R

3 + T

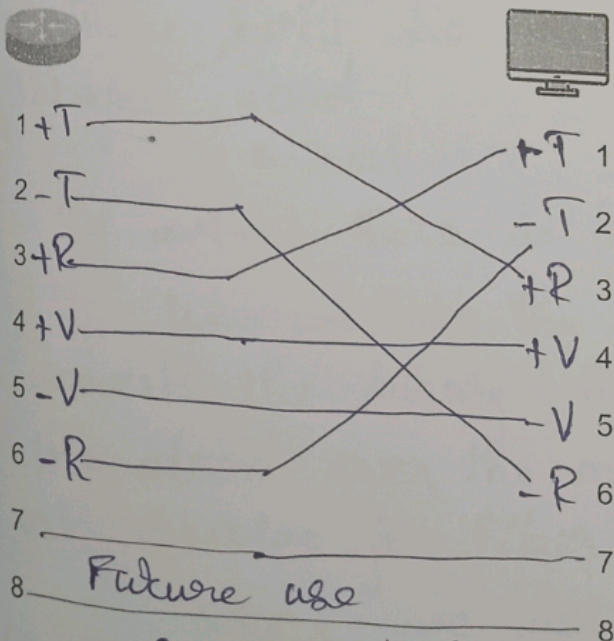

4 + V

5 - V

6 - T

7 } Reserved for future use.
8 }

3, Connect utp cable between two devices

Cross Cable (Same Function)

4, Explain AUTO MDIX ?

Automatic Medium Dependent Interface Cross over.

which is an technology available in the modern NIC (Network Interface card) suppose if we give the connector reverse also it will exchange the Pin automatically to Transmit and Receive (T+R)

5, Explain POE injector ?

6, Explain POE switch ?

Power over ~~Ethernet~~ Ethernet switch

using this we can cable to give the power to the devices over the ethernet itself no need to give the separate power but to achieve this is the Switch and the device we need this POE Technology.

7, Explain types of nic & function ?

There will be a two Types of Network Interface card.

* Wired

* wireless.

In wired there is two * Ethernet * Fiber Cable.

When we use the wired technology it will converts the binary into electrical signal to transmit the data over the medium and then electrical to binary at receive, for Fiber means Light signal

where we use the wireless technology means binary to radio frequency to transmit and radio frequency to binary on the Receiver end.
